

# e-billing

Reduced cost delivery of bills.  
Instant delivery to customers.

Whether you have millions of invoices to distribute or simply dozens of documents, FCS Laser Mail has a solution tailored to suit your needs. Our complete e-delivery service runs seamlessly alongside your paper production.

**With the majority of our clients having a mix of paper and electronic presentment, FCS can manage this process so that transactional documents are presented in a timely manner as per your expressed requirements.**

In recent years, as the costs of this technology have come down, more and more companies have been moving towards implementing e-billing solutions because of the range of benefits it can bring. This functionality will allow you to speed up your cashflow by getting invoices to customers faster, and reduce invoicing costs along every step of the billing process.

#### **Streamline operations – enhance relationships**

Our e-billing solution provides B2B and B2C customers with the ability to cost-effectively present personalised documents like bills, statements and letters to their customers online, helping them to streamline their operations and enhance customer relationships.

**Documents can be created to your exact requirements, sent and stored securely providing you and your customers with the opportunity to archive and retrieve your documents more efficiently. Every step of the process is monitored and recorded at FCS, giving you control, accountability and confidence in the service we're providing.**

In addition to obvious reductions in postage and stationery costs, increased pressure is now being placed on companies to reduce their carbon footprints. Therefore, adopting our e-services can provide you with a way of reducing the amount of paper documents produced and allow you to play a practical and effective role in your overall carbon reduction.
